NHS Scotland Accident & Emergency Department Performance Dashboard — Decision Snapshot

Purpose
Turn long-running NHS Scotland A&E reporting data (2007–2025) into a clear view of demand and waiting-time pressure

What was tricky
Multiple tables and metric “measures” had to work together, or the filters and totals would not match.

What I did
Built a Power BI semantic model so KPIs stay consistent across every page. Created a 3-page dashboard: overview, drivers (timing + referral), and definitions.

Use the year-range filter to compare periods and spot pressure patterns quickly. Use the drivers page to see when peaks happen and how people arrive.

Repo / methods / visuals: Project 03 — NHS Scotland A&E Performance Analysis (Power BI)

Made by Joost Kinnaer

NHS Scotland A&E: Demand and Waiting Time Performance (2007–2025)

Shows demand and waiting-time performance for the NHS Scotland Accident & Emergency Department (incl. date range filter).
